

## **Integrity (Bhavika Joshi)**

- Throughout the week, I made sure that all team members maintain integrity. During this week, we had one meeting in which we discussed about design patterns and the progress of the project.
- I made sure that all team members have worked as per the given timeline and have given their best to the project.
- I also made sure that each team member participates in the group discussion and maintain translucent approach towards the project.
- During the meeting, everyone has given their ideas and I found that each team member's ideas were respected.
- I also took care that each member gave honest opinion on the design patterns implemented and issues occurred during the implementation. All team members were solved those problems together and worked coherently.
- I saw that each team member has maintained the integrity of their own work and the same for other's work. Up to this week, the environment of the project has keep clear.
- I made sure that all team members got the access to the data and the time of interaction, it must not be changed by unauthorized people.
- All team member has used version control approach to avoid faulty changes or accidental removal of data.
- Up to this week, we maintained backups or redundancies for restoring data to its accurate state.
- Up to this week, all team members have followed transparency and co-ordinate as per the decided approach and I will make sure that the same will be followed in upcoming weeks.
