

Integrity (Bhavika Joshi):

I made sure that my team maintained integrity throughout the week. We had two meetings this week. One for discussing what all should be done for the Team Project Part – 2 and how will it be done. The second meeting was for deciding the UML diagrams and implementing the front end.

I made sure that everyone was assigned their work properly and maintained that the discussions and ideas were free from flaw. Everyone gave their own ideas and I saw to it that each member's ideas were respected.

Different members suggested tools that can be used for designing UML diagrams and UI wireframes. Also, I maintained that each member gave honest opinions on the tools and UML diagrams. Also, I maintained that each member was given the proper credits for their work. I maintained that there was coherence maintained throughout the work and members worked with togetherness.

I made sure that sincerity was maintained throughout the week and every member was respectful of other's work.

I made sure that all discussions should be translucent and all team members should respect thoughts of each other.

We continued to use version control approach to prevent unwanted errors.

Thus, I maintained integrity for the team project.
