

## **Integrity (Bhavika Joshi)**

- During this week, we had two meetings. In first meeting, we have discussed what is to be done and the other for designing part.
- I made sure that everyone has done their assigned work properly and has given their best to the project.
- Throughout the project, I made sure that all team members have maintained translucent approach for the project and maintained accuracy in discussion to avoid conflicts.
- During the interaction, I saw that each team members have given respect to other people's ideas and communicated nicely.
- I made sure that all team members have maintained consistency and trustworthiness of their own work and the same for other team members.
- I found that each team members were solved problems together and worked coherently for the entire project. And the environment of the project has kept clear.
- Up to this week, we maintained backups for restoring data to its accurate state.
- All team members have used version control approach to avoid faulty changes or accidental removal of data.
- I made sure that all team members got the access to the data and at the time of interaction, it must not be changed by unauthorized people.
- Throughout the project, I saw that all team members have expressed their ideas with open mind and discussion was to be point.
- All team members have maintained the holistic approach for the project. So, this is how I have maintained the integrity throughout the project and I enjoyed working with them
