Communication (Manu Barsainyan):

- This week, we conducted one meeting which mainly focused on design patterns and discussion on project's progress.
- This meeting helped us to discuss about what design pattern will be used by each member.
- We also further discussed everyone's task and documented their progress.
- All members were asked to present the issues they faced while working on their tasks.
- Later, we addressed and found optimal solutions to each of them.
- We used the decentralized decision making approach due to which each member contributed in picking up the suitable design patterns according to the tasks.
- We also discussed about the demonstrated weekly assigned tasks.
- I made sure each member contributes in providing their feedback on every tasks. This week, we had to demonstrate activity diagram, UI wireframes, user stories and use case specifications.
- We also discussed about making code more efficient by considering manu refactoring methods.
- We finished our meeting by summarizing and documenting this gist of this week's work.
